Relative Illuminance*

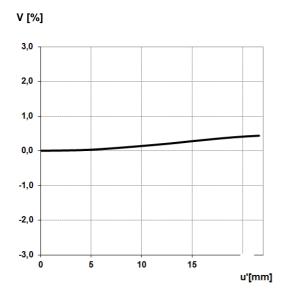

The relative illumination shows the decrease in image brightness from the image center to the edge in percent.

 $_{f-number} = 2$

 \dots f-number = 4

---f-number = 4.8

Relative Distortion*

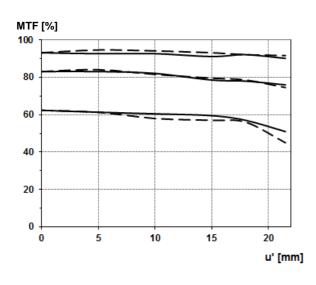

The relative distortion shows the deviation of the actual image height from the ideal one in percent.

MTF Charts*

The Modulation Transfer (MTF) as a function of image height (u) and slit orientation (sagittal, tangential) has been measured with white light at spatial frequencies of R = 10, 20 and 40 cycles/mm.
